

Civil and Environmental Engineering

Bachelor of Science

What is Civil and Environmental Engineering?

As a civil and environmental engineering major at South Dakota Mines, you'll be studying one of the oldest engineering fields in history. Our modern society depends on the expertise of civil and environmental engineers to design, build, and maintain critical infrastructure, from roads to bridges and even water treatment systems.

What does a civil and environmental engineer do?

Civil and environmental engineers design, build, and maintain infrastructure that works in harmony with our natural world. This includes the roads, bridges, and railways we use to travel; the buildings where we go to work, go to school and live; the water treatment plants and distribution systems that supply the water we use; and much more.

As a South Dakota Mines civil and environmental engineering graduate, you can expect to earn an average starting salary of \$60,794.

You will go on to work for companies like Kiewit, Mortenson, and the US Department of Interior. One of our civil engineering graduates - John W. Henderson - became Assistant Secretary of the Air Force Installations, Environment and Energy. The job placement rate for 2018-2019 South Dakota Mines civil and environmental engineering graduates was 97%.

Careers

With a degree in civil and environmental engineering from South Dakota Mines, you will become a problem solver, entrepreneur, and innovator. You will be able to work in a wide variety of careers and fields including construction, structural, geotechnical, transportation, water resources, and environmental engineering.
